Transportation Design Projects

1.a Italdesign Vital

About the Project

Green life is a project based on the concept of a small city car powered by a plant. In current day plants are used to power a few bulbs but in the future we imagine that a plant could be used to power a motor that can be a new source of energy.

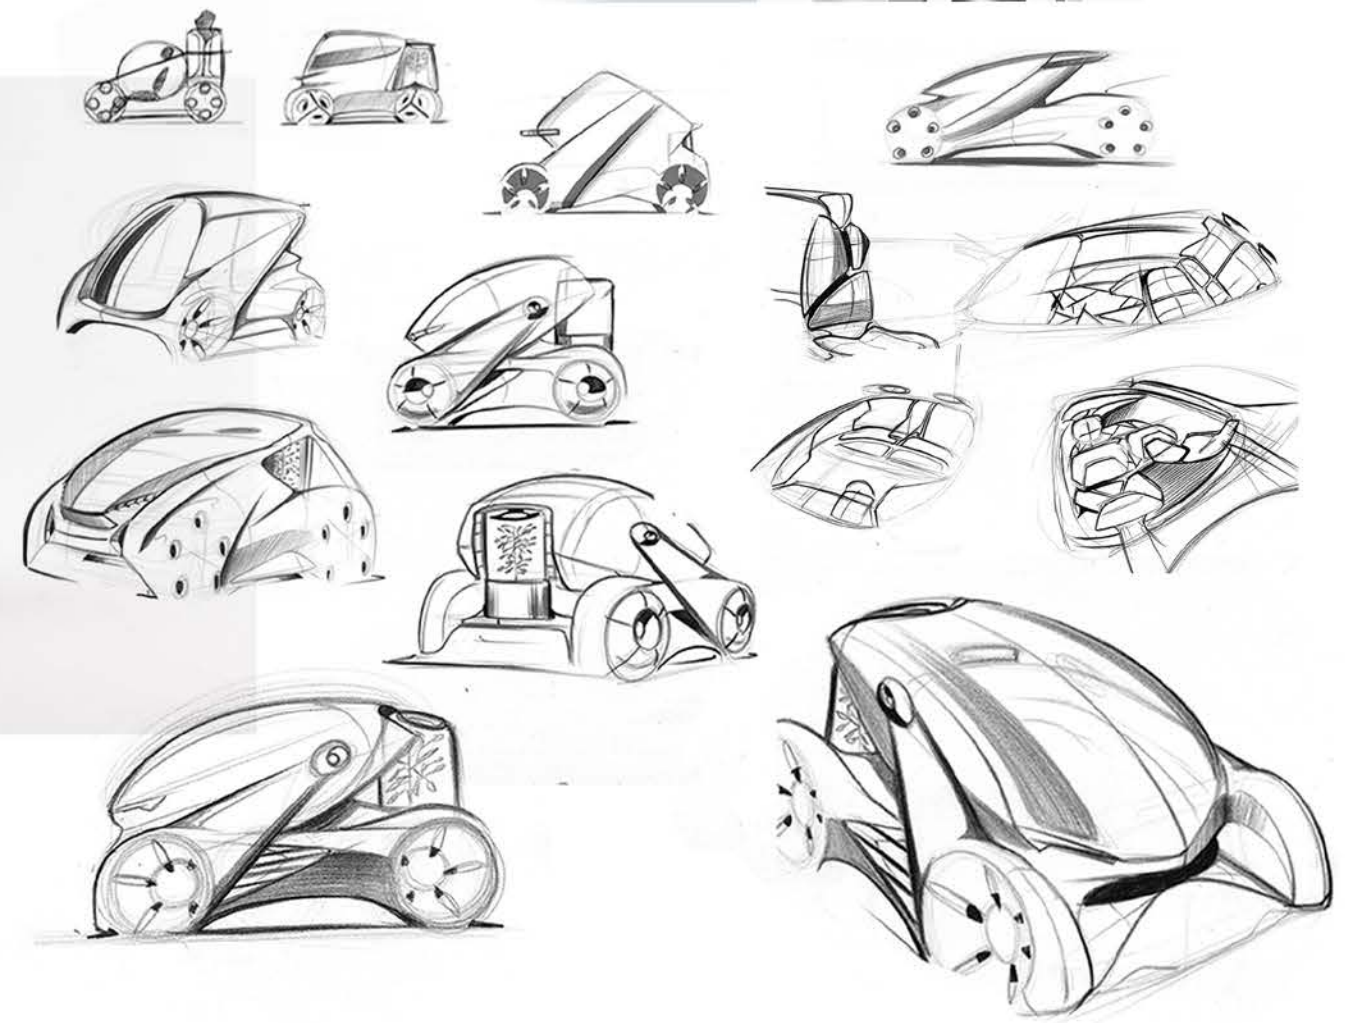

The Tube

Target User

Age: 25-35

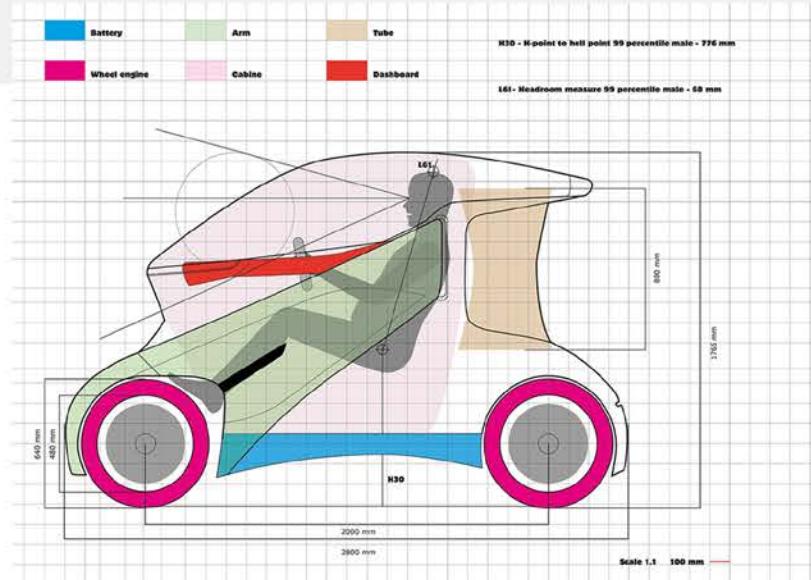

Occupation: Horticulturist

Belives in a more healthy land fresh lifestyle. More than being eco freindly she makes a point to promote a more eco caontious behaviour through her activities.

Exterior Design

The exterior is shaped around the plant and the arm like structure that wraps around the car and enters the side to become the back support of the seat. The dimensions are of a small 2 seater city car such as the smart.

Optional Luggage storage

Opening for air and water

Interior Design

An interior that is inspired by nature and gives a strong message of energy flow through the connection of the external arm to the back of the seats. A simplistic dashboard with a layered design. Headrest that move backwards and become the taillamps of the car. Seats that give fresh oxygen from the plants to the user so as to have a healthy environment in the car.

Seat and control button

Air Vent

Steering wheel

Scale Model

The final output was a 1:3 scale model which was produced using a combination of 3d printing and milling for different parts.

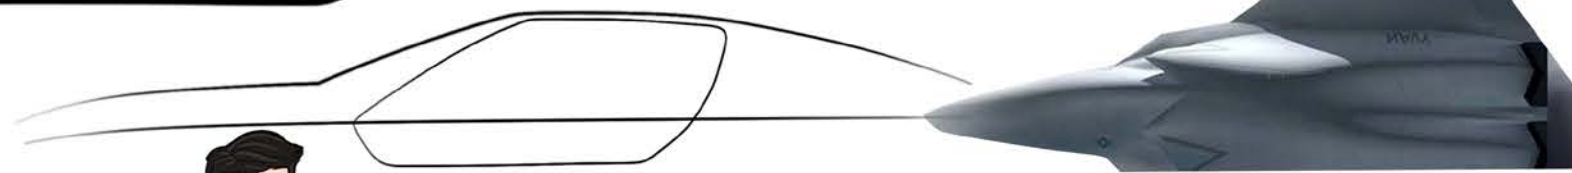

1.b Lamborghini Cretan

About the Project

The concept inspired by the original Lamborghini Marzal was developed using the shape of the side glass of the Marzal using a modern day lamborghini styling and a sense of soft aggression in its form.

Key Lines

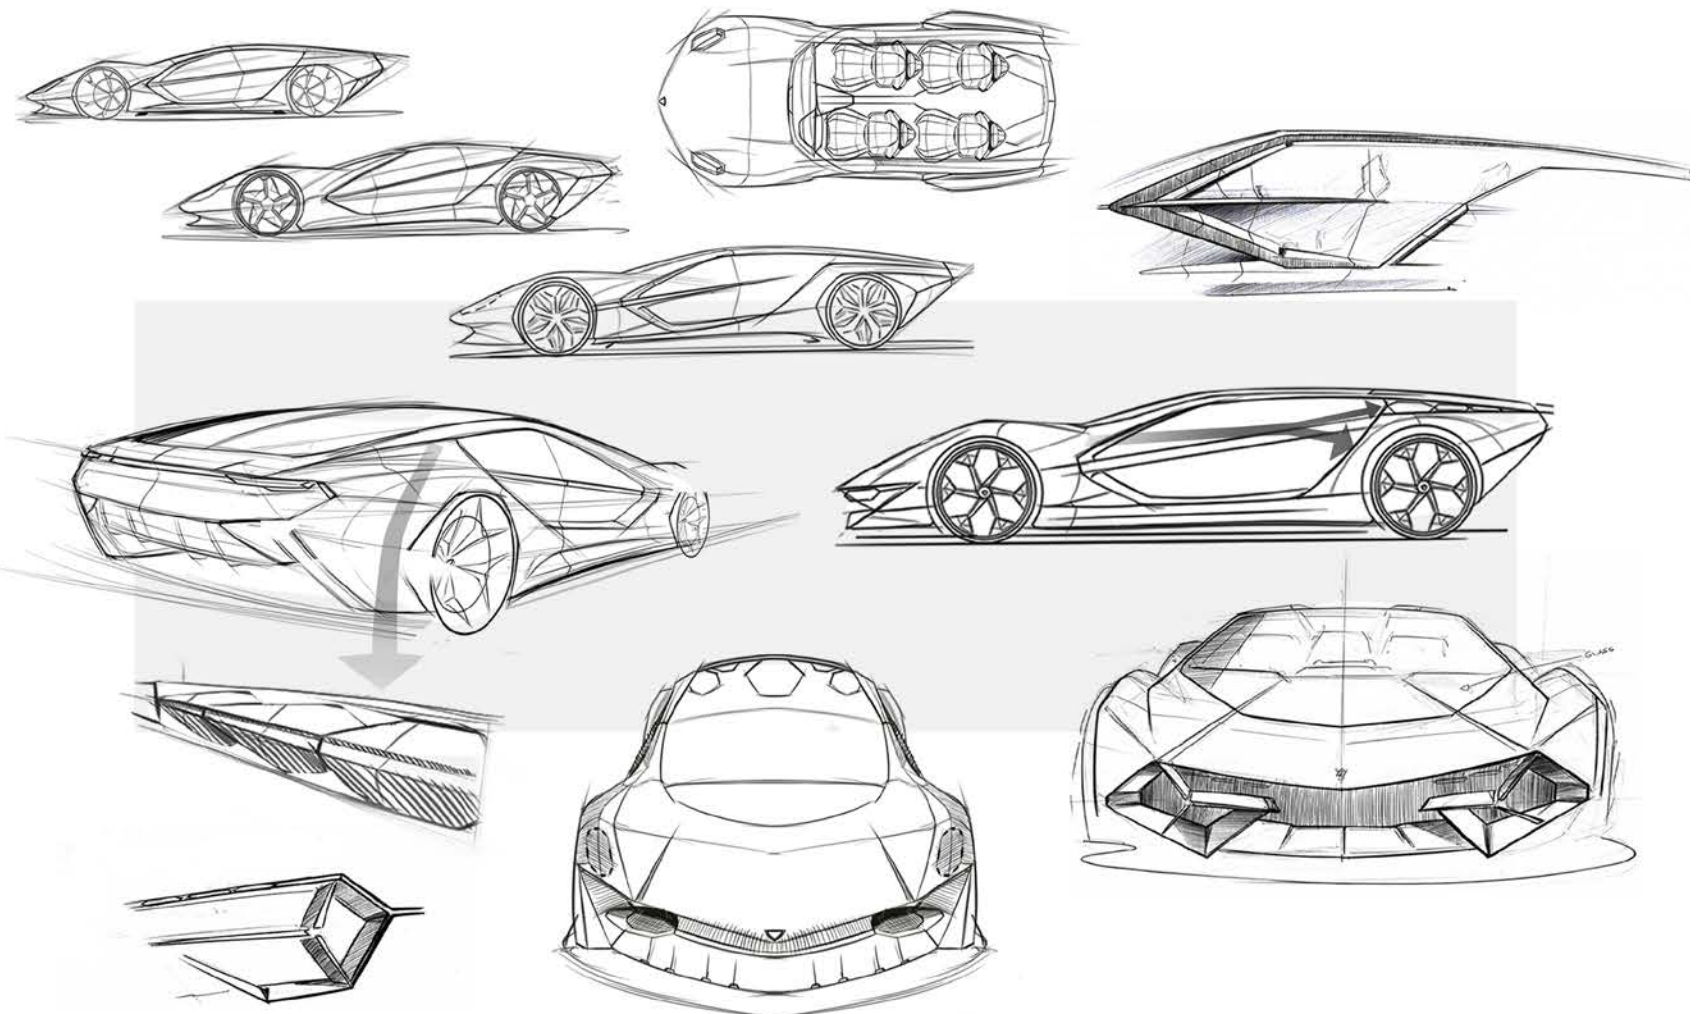

Target User

Age: 30-40

Occupation: Actor

Has a passion for sports cars and is looking for a more spacious vehicle that can still maintain its sportiness and give the comfort of a sedan.

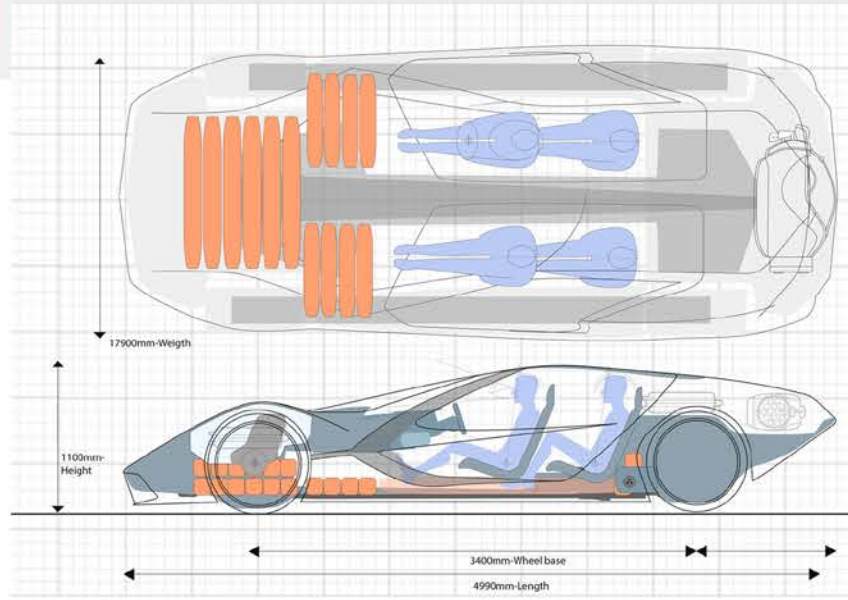

Exterior Design

The concept is a four seater sports sedan like its predecessor the marzal. Using a more streamlined Y0 and an extended wheelbase a unique proportion for a super sedan was created.

Hex glass texture

Other Colour options

Bold Onyx

Flashy Ivory

Interior Design

The Interior for the Cretan is inspired by space exploration and is aimed to give the user the feeling that they are entering into a space ship.

Environment Render

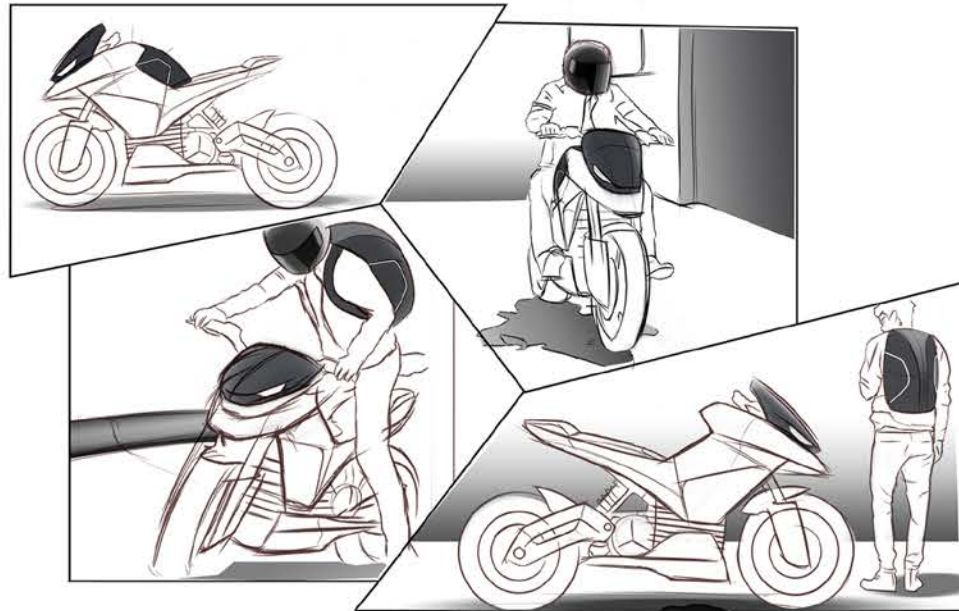

Created using autodesk alias and VRED with postproduction on photoshop

1.c Ducati Hydra

About the Project

Designing a new Motorbike which will combine the functionality and comfort of a scooter with the zest and dynamism of a sports bike thus creating a new motorbike architecture that every youngster would dream to own.

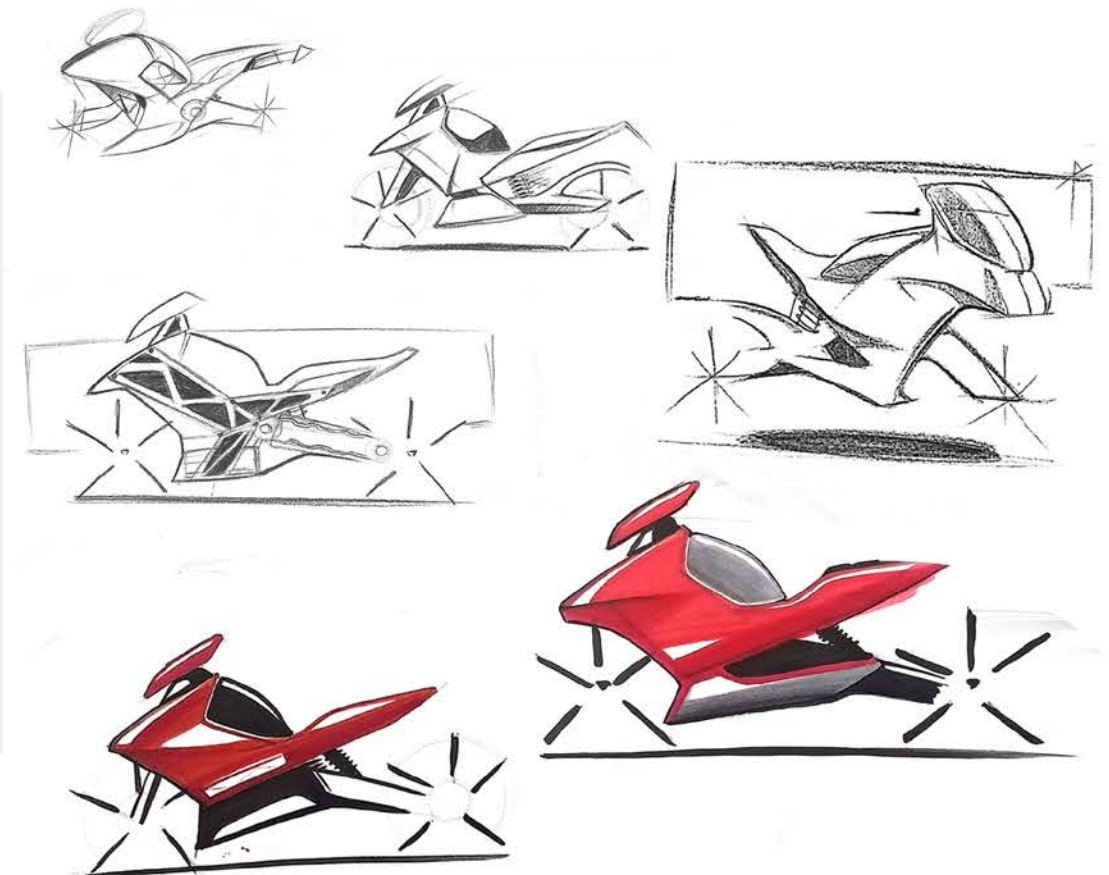

The Bag Concept

Target User

Age: 20-25

Occupation: Student

A college going student who is a big fan of motorcycles but is looking for a new 2 wheeler that will suit his day to day travel to college.

Body work and details

One of the most striking feature of the bike is the rmovable backpack as explained in the story board. Since the motorbike is electric the extraspace of the fuel tank is now dedicated to a custom backpack.

Personal Projects

2.a Honda Urban Scooter

About the Project

A mini project for a city mobility personal scooter. The key feature of the scooter is that it can be folded up and strolled around or even carried and parked at any location without it consuming a lot of space.

2.b Alfa Romeo Bellano

About the Project

A hyper performance track car inspired by the shape of a dragon fly. Using its flaps on the fenders the car is able to control accurate downforce for perfect maneuverability.

2.c Mazda MX-5 Restyling

About the Project

The aim was to develop a new face and styling for the Mazda MX-5 based on an original photograph.
